High Pressure Refrigerated Air Dryers

HPET SERIES 30 to 3000 scfm (51 to 5100 nm³/h)

Compressed Air Treatment Solutions

HPET Series

Hankison HPET refrigerated air dryers are an integral component for high pressure compressed air installations. A trusted brand name known since 1948, Hankison air treatment products remove water vapor, solid particulate and oil areosls and vapor for efficient compressed air systems. Designed for 725 psig (50 bar) operation, applications for HPET dryers include blow molding, aeronautical valve testing, pharmaceutical packaging and injection molding.

Hankison HPET Series dryers are built in accordance to UL/ CSA certification and offer time-tested, field proven technology guaranteed to provide years of trouble free service.

Product Features and Benefits

Supreme Craftmanship

- · 316 stainless steel brazed plate heat exchangers- No pre-filtration required
- Rugged hermetically sealed refrigeration systems provide years of trouble free service
- Employs environmentally friendly HFC refrigerants
- Unique cabinet design promotes ease of access to perform routine maintenance Precision hot gas bypass valve maintains evaportator temperature with freeze-ups

Filtration

- Standard filter/separator removes bulk liquids and particles down to 3 micron in size
- Timed electric condensate drain reliably discharges contamination from system
- Optional filtration available for Normal and Severe Operation

User-Friendly Instrumentation

- Indication lights include:
 - Power on
 - Compressor on
 - Refrigerant fault alarm
 - Dew point temperature indicator Timer drain programming mode

Options

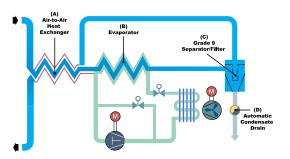

Dry contact for fault condition

Product Specifications

How it Works: Air Drying Circuit

Compressed air, saturated with water vapor, enters the air-to-air heat exchanger (A), is precooled by the outgoing chilled air, and then directed to the air-to-refrigerant (evaporator) heat exchanger (B) where it is further cooled by the refrigeration system. As the air is cooled, water vapor condenses into liquid droplets which are removed by the separator/filter (C) and discharged from the dryer by an automatic drain (D). Dry, chilled air then returns through the air-to-air heat exchanger where it is reheated before exiting the dryer.

HPET Series Product Specifications

1 Rated Flow Capacity - Conditions are 100°F (38°C) inlet temperature, saturated with water vapor, 725 psig (50 bar) inlet pressure, 100°F (38° C) ambient temperature, 60Hz . 50Hz units are available.

HPET Series Optional Filtration

Refrigerated Dryer Model	3 Micron Particulate Prefilter	1 Micron Particulate Afterfilter		
HPET-1	HF9-20-8-69	HF7-20-8-69		
HPET-1.5	HF9-24-8-69	HF7-24-8-69		
HPET-2.5 - HPET-4	HF9-32-8-69	HF7-32-8-69		
HPET-6 - HPET-10	HF9-52-24-48	HF7-52-24-48		

Selecting your Filtration

When selecting filtration for your HPET system consider your operating conditions. Normal operating conditions utilize Grade 7 and 3 filtration. For severe opertating conditions utilize Grade 9, 7, and 3 filtration in your system.

Capacity Correction Factors

To adjust dryer capacity for conditions other than rated, use Correction Factors (multipliers) from Tables 1 and 2.

Example: What is the capacity of an HPET-3.5 when the compressed air at the inlet to the dryer is 500 psig (34.5 bar) and 110°F (43°C), the ambient temperature is 90°F (32°C), and the operating voltage is 380/3/50? **Answer:** 1,000 scfm (rated flow from Product Specifications Table) x 0.83 (Correction Factor from Table 1) x 1.06 (Correction Factor from Table 2) x 0.83 (Electrical Frequency for 50 Hz, for 60 Hz no adjustment is required) = 730 scfm (1,240 nm3/h).

Table 1 - Inlet Temperature & Pressure

Inlet Pressure	80°F	90°F	100°F	110°F	120°F
	27°C	32°C	38°C	43°F	49°F
300 psig to MWP 20 bar to MWP	1.49	1.19	1.0	.83	.72

Table 2 - Ambient Temperature*

Ambient	80°F	90°F	100°F	110°F
Temperature	27°C	32°C	38°C	49°C
Multiplier	1.12	1.06	1.00	0.94

* Air-cooled models only. For water-cooled use a 1.15 multiplier if cooling water is less than 95°F (35°C).
